

The Asymmetric Ejecta of Cool Supergiants and Hypergiants in Westerlund 1

Holly Andrews, Danielle Fenech, Raman Prinja, Simon Clark, Luke Hindson

- Observations were carried out on Westerlund 1 to investigate the extended stellar winds of post-main sequence stars.
- Showed evidence for asymmetric ejecta around several cool supergiants and hypergiants.
- 3 yellow hypergiants: W4, W12a, W265.
- 3 red supergiants: W20, W26, W237.
- Clear evidence of intra-cluster outflow.
- If you'd like to know more, please come see my poster!
